

Press Release

Expansion of the European competence team for device qualification of analytical measuring devices for particle and dispersion characterization

Berlin, 5 October 2021:

The implementation of the system qualification is an important part of the quality management system for manufacturing companies in the pharmaceutical industry. As part of Good Manufacturing Practice (GMP), there are similar requirements in the food and cosmetics industries. Along with the increasing use of the stability analysers LUMiFuge and dispersion analysers LUMiSizer beyond the research area also in production and quality control in these industries, the demand for installation (IQ) and operational (OQ) and performance qualification (PQ) for these LUM measuring devices is increasing. The responsible European competence team at LUM GmbH and its European sales partners has now been strengthened. After successfully passing the exam, the sales partners NGLAB in Poland and Oleinitic in Scandinavia can now carry out IQOQ independently and provide direct customer support for PQ. LUM GmbH and LUM France have also qualified additional employees and are thus meeting the growing demand. We welcome your inquiry.
